L'outil Feedly

Feedly est une application et un service web d'agrégation de nouvelles qui permet aux utilisateurs d'organiser, lire et partager du contenu provenant de leurs sites web et blogs préférés en un seul endroit. Feedly utilise des flux RSS (Really Simple Syndication) pour recueillir et afficher les dernières mises à jour des sites suivis par les utilisateurs, dans un format épuré et facile à lire. La plateforme est utilisée tant par des particuliers que par des professionnels souhaitant rester informés sur des sujets spécifiques, car elle permet de personnaliser et de catégoriser les sources d'information selon les intérêts de chacun.

Why Data Sovereignty Matters More Than Ever
Nordic APIs / 3min

For a long time, people viewed the internet as the final frontier — a sort of Wild West with no borders and no real limitations in cross-territorial exchange. In reality, the internet has always relied on geographically...

War Plan Chat Includes Journalist
Journalist mistakenly added to war chat • Security Boulevard / 6h

Journalists aren't usually invited to online chats about US war plans. This seemed obvious until yesterday, when Atlantic editor Jeffrey Goldberg published his article about being a lurker in an online chat...
